Allcast apk not working

I just set up my friend with a showbox app for his android device. He got a premium version of Allcast so he could broadcast it on his TV. I was told it didn't work. I was just testing it myself, and it's not a broadcast. Not sure if it's a showbox app or an Allcast app. All the other features in Allcast seem to work... So yes... Anyone else have any solution to it?

AllCast is a clockworkmod app where your device connects to photo and video sharing TVs. The app allows users to connect their devices to platforms such as Chromecast, Apple TV, Amazon FireTV, Xbox 360, Xbox One, WDTV, Roku, Samsung, Sony and Panasonic Smart TV, and other DLNA-compatible renderers. Users can stream directly from their Dropbox and Google Drive accounts. The status of your WiFi or network connection can be viewed through this app. Scan all devices logged on to your local area network by changing wi-fi statuses. Any device can be connected while streaming with Wake Lock. Access media files from your SD card and other external read/write repositories. The application is also able to perform google music casting. Watching media from device to TV Supports most DLNA renderers Slusing media content Requires tv player connected to the device first Only 5 minutes viewing limit Media played depends on the device's content The fact is that Allcast just does not work for some people with some devices. That's why you should get a free version and/or free trial before you pay any money. There's a FAQ section on the Wiki page that can help because some of your problems may be the result of a common device problem. Paying for the premium version won't suddenly make TV casting software work. There is a free version and there is a cheap premium version. If you're paying for the premium version, there are no limits on video lengths. There are no splash screens and there are no ads of any kind if you pay for the premium version. The free-trial version is more of a Try-Before-You-Buy offer where you can check if the software actually works properly before you buy it. Some people in some countries are only offered a free trial and not a free (ad powered) version. Start by sending a lower-quality video to see if your videos start running at normal speed. If so, then your problem is probably caused by congestion within the wireless internet. Go to Allcast Settings and change the bit stream to reduce the quality of your videos. When casting, you should see the Stop button appear above the file you are casting. You need to press the file button if you want to stop casting. Sadly, there are some devices and associated programs that create a problem where you don't see a button through the file. For example, if some devices go into screen saver mode, the screen casting stop button disappears. Oddly enough no way to rotate the screen when cast. This means that if you have taken the video sideways or upside down, it will appear sideways upside down when you view this video on your TV. You can't do it with Allcast, so you have to do it with a PC or Mac. You'll need to download a video editor like Blender or another free video editor. You will need to use this video editor to change the rotation of the screen and then create a new video file. When you load a video file into the video editor, it starts by displaying it with the same rotation that you see on the TV when cast. Correct the rotation, publish the file (create a file), and then switch the new video file to the TV. Wiki and FAQ sections are almost always behind them, as new game consoles, TVs, and mobile devices are released every year. The easiest way is often to Google the name of your device plus the name Allcast and see if anyone online has complained about it. Your pictures, even your big pictures, should load fairly quickly. Usually what slows things down is if your casting device or your receiving device is/are busy doing other things. Wireless network congestion may also be the cause. How to Read more Download the AllCast app to your phone and I have a Chromecast on the TV right now, but the AllCast app is not connecting. It was on Finding Players... screen on your phone for about 10 minutes and still no connection. Is anyone else with this problem? All fixed!
